PROFILE

Developer with a backend focus (TypeScript, Node.js, NestJS, React), on an apprenticeship (work-study) at Aphilia, building Monora, the back-office platform of PI Electronique's restaurant POS systems. Cut endpoint latency by 18% and built Datadog observability and Jest/Cypress test suites. Trained in secure development, with security audits on academic projects. Autonomous and adaptable: studied in Mexico and France and led my UTEZ capstone project.

WORK EXPERIENCE

Aphilia — Paris | 10/2024 – 11/2026 (expected)

Backend Developer (Apprenticeship / Work-Study) · 30-person start-up, PI Electronique group

Monora Back Office: reporting and administration hub of PI Electronique (French leader in restaurant POS systems).

- Developed features across the stack, mostly back-end (NestJS, TypeORM, MySQL), for menu and item management (catalogues, prices, promotions), with some front-end work (new React components for new features, bug fixes).
- Cut p50 latency of listing endpoints by 18% by replacing to-many joins with a batch query.
- Diagnosed 50 s lock waits and HTTP 429 errors with Datadog, then fixed them by optimising SQL queries.
- Built Datadog dashboards (application health, API latency, sync success/failure KPI) and added structured logs to make terminal sync issues easier to trace.
- Wrote Jest (unit, integration) and Cypress (E2E) tests run in CI, and ran load tests.
- Used Claude Code daily, reviewing and validating all generated code before merging.

French National Research Institute for Sustainable Development (IRD) — Paris | 03/2024 – 07/2024

Full-Stack Developer Intern

- Developed a mobile data-collection app (Flutter, Django), published on Google Play (available in Côte d'Ivoire), and a Grafana dashboard to visualise the collected data.
- Performed corrective and adaptive maintenance of the team's existing website for the IT manager.

PROJECTS

GABOR45 — Orléans | 09/2023 – 01/2024

Frontend Developer · Tutors project, Université d'Orléans · github.com/MaxRonce/GABOR45

- Developed the authentication, farmers, events and categories modules and farmer search of a mobile app for an organic farmers' association (Ionic React, TypeScript, Supabase, Nx, Capacitor).

IT Equipment Loan Manager — Morelos, Mexico | 09/2022 – 12/2022

Developer and project lead · Capstone project, UTEZ

- Led a 5-person team and the client meetings, and developed a web and mobile app to manage IT equipment loans tracked by QR codes (Java, Spring Boot, MySQL).

EDUCATION

LiveCampus — Online | 10/2024 – 11/2026 (expected)

Master's degree: Expert en sécurité des développements informatiques (Expert in IT Development Security), RNCP Level 7 (Bac+5), work-study

- Performed security audits and testing of web applications with OWASP ZAP and SonarQube (academic projects), identifying SQL injections, XSS and missing security headers.

Université d'Orléans — Orléans | 09/2023 – 07/2024

BUT Computer Science, 3rd year (exchange, after two years at UTEZ, Mexico)

Emiliano Zapata Technological University (UTEZ) — Morelos, Mexico | 09/2021 – 07/2023

University Technician Degree in Multiplatform Software Development

SKILLS

Backend: TypeScript, JavaScript, Node.js, NestJS, Express, Django, REST APIs, microservices

Frontend & mobile: React, Ionic React, Flutter

Databases: MySQL, PostgreSQL, Redis, Supabase, TypeORM, SQL query optimisation

Testing & CI: Jest (unit and integration tests), Cypress (E2E), load testing, Nx monorepo, CI pipelines

DevOps & observability: Docker, Git, GitHub Actions, Datadog, Grafana, GCP (Cloud Storage, Pub/Sub)

Security (academic projects): SonarQube, OWASP ZAP
